SALES PERFORMANCE REPORT

Fiscal Years 2014 – 2016

Prepared by: Rida Ayaz

Source: Sales Performance Dashboard

1. Executive Summary

This report summarizes overall sales performance based on the company's Sales Performance Dashboard, covering order year 2014 through 2016. The business generated total sales of $2.30M across 9,994 orders, yielding a total profit of $286,397 and an average order value of $229.86. Performance was driven primarily by the Technology category, the Consumer customer segment, and the West region, with a pronounced seasonal uplift in the final quarter of each year.

The purpose of this report is to translate the dashboard's underlying data into a narrative summary that stakeholders can use to evaluate current performance and inform decisions on category investment, regional resourcing, and seasonal planning.

2. Key Performance Metrics

The table below presents the four headline metrics tracked on the dashboard.

$2.30M Total Sales	**$286,397** Total Profit	**9,994** Total Orders	**$229.86** Avg Order Value

A profit-to-sales ratio of approximately 12.4% indicates a healthy but moderate margin, consistent with a product mix weighted toward hardware and office equipment, where margins are typically thinner than in services.

3. Revenue and Profit Trends

3.1 Monthly Revenue Trend

Monthly revenue fluctuated between roughly $140,000 and $260,000 across the year, with a visible upward trajectory in the second half. Revenue dipped in February and again in April before recovering, and the strongest months were September and November-December, where revenue approached its annual peak.

3.2 Monthly Profit Trend

Monthly profit followed a similar but more volatile pattern, ranging from approximately $10,000 in low months (April and July) to over $34,000 in September. As with revenue, profit strengthened markedly from September through December, confirming a consistent year-end seasonal effect across both top-line and bottom-line performance.

Recommendation:

Given the consistent October–December uplift, inventory, staffing, and marketing budgets should be weighted toward the fourth quarter to capitalize on the demand surge, while the April and July troughs may warrant targeted promotions to smooth cash flow.

4. Category Performance

Revenue by product category shows a clear leader:

Category	Approx. Revenue	Standing
Technology	$840,000+	Highest-performing category
Furniture	~$740,000	Second-highest
Office Supplies	~$720,000	Lowest of the three

Technology generated the highest revenue across all product categories, outperforming Furniture and Office Supplies by a meaningful margin. This suggests Technology should remain the primary focus for continued investment, upselling, and cross-selling initiatives.

5. Customer Segment Performance

Sales are broken down across three customer segments: Consumer, Corporate, and Home Office. Consumer customers contributed the largest share of overall revenue, forming roughly half of total sales, with Corporate as the second-largest contributor and Home Office the smallest segment.

This concentration in the Consumer segment highlights both an opportunity and a risk: continued growth is likely to keep coming from this base, but the business may be under-penetrated in the Corporate and Home Office segments, representing room for targeted account growth.

6. Regional Performance

Sales performance varies meaningfully by region:

Region	Performance
West	Highest total sales of all regions (~$700,000+)
East	Second-highest, closely behind West (~$670,000)
Central	Mid-tier performer (~$500,000)
South	Lowest-performing region (~$390,000)

The West region recorded the highest total sales, while the South region had the lowest, a gap of roughly $300,000. This disparity suggests the South region may benefit from a deeper review of local demand drivers, sales coverage, or marketing investment relative to the higher-performing regions.

7. Top-Selling Products

The Canon imageCLASS 2200 was the highest-selling product, generating over $60,000 in sales — well ahead of the next closest products, including the Fellowes PB500 Electric Punch and the Cisco TelePresence System. The top 10 product list is dominated by office technology and equipment (printers, imaging systems, and electric binding/punching machines), reinforcing the Technology category's role as the primary revenue driver identified in Section 4.

8. Key Insights Summary

- Technology generated the highest revenue across all product categories.
- The West region recorded the highest total sales, while the South region had the lowest.
- Consumer customers contributed the largest share of overall revenue.
- Sales and profit were strongest during October–December, indicating a year-end increase in demand.
- The Canon imageCLASS 2200 was the highest-selling product, generating over $60K in sales.

9. Recommendations

- Continue prioritizing investment in the Technology category, given its consistent lead in revenue generation.
- Align inventory and marketing spend with the observed Q4 seasonal peak to maximize year-end demand.
- Investigate the underperformance of the South region to identify whether the gap stems from demand, coverage, or execution.
- Explore growth opportunities in the Corporate and Home Office segments to reduce reliance on the Consumer base.
- Evaluate whether top-performing products such as the Canon imageCLASS 2200 can be leveraged for bundling or cross-sell campaigns.

10. Conclusion

Overall, the business delivered solid performance over the 2014–2016 period, anchored by strong Technology sales, a loyal Consumer customer base, and a reliable year-end seasonal lift. The clearest opportunities for improvement lie in closing the regional gap between the West and South, and in diversifying revenue further into the Corporate and Home Office segments. These findings are intended to support stakeholder discussions on where to focus resources in the coming planning cycle.
